(Bhadra 24th, 2077)

Background

Nepal is endowed with rich and varied biodiversity. Altitudinal variances in short distance give Nepal's biogeography variety that range from lush moist forests and sparse alpine deserts to luxurious grasslands in lowland Tarai. The mountainous country also shelters some of the world's most rare animals. Sagarmatha (Mt. Everest) National Park and Chitwan National Park with typical natural, cultural and landscape characteristics were listed as World Heritage sites in 1979 and 1984, respectively.

Nepal has established a good network of protected areas. There are twelve national parks, one wildlife reserve, one hunting reserve, six conservation areas and thirteen buffer zones in and around national parks and reserves in Nepal (Figure 1). Within the coverage of protected areas in the country, conservation area covers highest part which is 44.82 % of total protected areas where as national park occupies 34.3 %, buffer zone area occupies 15.52 and hunting reserve and wildlife reserve cover 3.85 and 0.51 % respectively (Table 1). Not only the protected areas were established, Government of Nepal has intensified the protection measures too.

Table 1: Categories of Protected Areas in Nepal

Categories of PAs	No. of PAs	Covered Area (sq km)	Percentage
National Parks (NP)	12	11,806.02	34.30
Conservation Areas (CA)	6	15,425.95	44.82
Wildlife Reserves (WR)	1	175.00	0.51
Hunting Reserve (HR)	1	1325.00	3.85
Buffer Zone (BZ)	13	5,687.78	16.52
Total		34,419.75	23.39

A Geographical Information System (GIS) is a system of hardware, software and procedures to facilitate the management, manipulation, analysis, modeling,

representation and display of geo-referenced data to solve complex problems regarding planning and management of resources. A GIS plays an important role as a tool for environmental management, with the current greater concern for sustainable use of resources, and conservation and monitoring of biodiversity. In this direction, the GIS based database on existing area coverage within and around the protected areas by different administrative tiers has to be identified and created on thematic map and tabular form of database.

Objectives:

The prime objective of this study is to generate the GIS based database on existing area coverage of protected areas by local level. However specific objectives were;

- Support **DNPWC** in GIS Database management
- Prepare local level database and maps on area coverage by all PAs of Nepal (including BZ)

Methodology:

- Collected and compiled the existing GIS related protected area coverage data base from the department as well as relevant sources (DoS and MoFAGA).
- Verified with field offices by consultation to field staffs as per required and updated with central level information of Nepal Gazette records.
- Updated on final database and prepared report with fact figure on distribution of protected areas of Nepal by Province, District, Nagarpalika/Gaunpalika and Ward Level.

Output:

- Province, District, Nagarpalika/Gaunpalika and Ward Level Area Coverage Database on Protected Areas of Nepal with maps showing each administrative level boundary for all PAs including BZ.
